AV of "city in the sky".

Summary of Information

Overall, the target gives one a sense of awe and the concept of Mother Earth/Nature in its enormity. There is an ongoing naturally occurring process on a gigantic scale. This process is unstoppable by human standards.

There was an AV (advanced visual, or more appropriately, an advanced concept) of a "city in the sky".

The view is of a wide open valley or bowl with a small village or settlement in the bottom. The vantage point is from a place where there is a sheer, steep shiny surface on one side. This surface is gray-blue and reflects light. The entire scene is very bright. There is a sense of loftiness and a "sheer-drop".

There is a rotating motion related to a directed, surging power. This motion is contained or associated with a funnel-like object. This feature produced a non-temperature related chill within me (i.e. an external stimulus not unlike an electric shock). There is a natural tumbled and rumbled aspect reminiscent of rocks associated with the target (see diagram).

There is a barrier or door which has been left partially open. There is an intense concern over a "support base" by one individual present. There is broken or disrupted equipment. There is an object which consists of a yellowish linear concentric alignment against a bluish background. This is iridescent or almost phosphorescent.

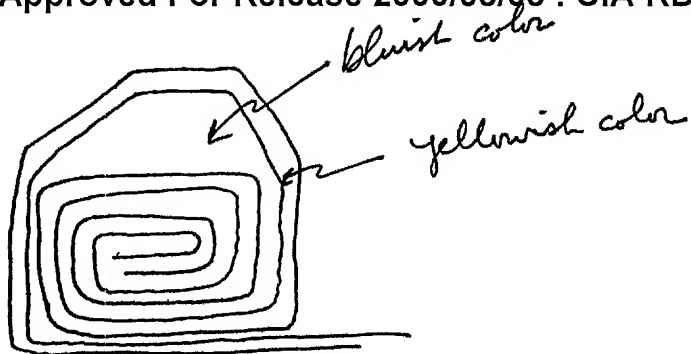

There is also a revolving yellowish object. It has, or is associated with, an ethereal presence.

There are numerous objects which are "wispy" and of very festive colors: reds, yellows, blues and greens. They are moving, generally in a slippery, "greasy" downslope motion and associated with brilliant white. There is also a "rocky" movement. There are "easy-go-lucky" attitudes somewhere on the site. At least a portion of this target is a place where one can "let their guard down". There are lumpy, orange-colored objects with parallel black curving lines.

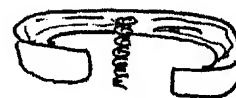

There is the concept of clamping or fastening; and of a clamp-like object. There is movement of large objects like two houses coming together. There is a screeching sound; it sounds like two pieces of refined metal being rubbed together with sand or grit in between. A "put your nerves/teeth on edge" type of sound.

There is an area which consists of a large crack-like feature which zig-zags through something which is usually very solid. This zig-zagging has caused a cracking of the solid

surroundings. This cracking has caused block-like features to form along the larger, zig-zagging cracks. This setting is reminiscent of a glacier field or bedrock.
